EDUCATION

Wentworth Institute of Technology | Boston, MA **August 2028**

B.S. in Computer Science

- **Relevant Courses:** Operating Systems, Databases, Algorithms, Network Programming, Data Structures, Software Engineering, Security Principles
- **Honors:** Dean's List (Fall 2024, Spring 2025)

TECHNICAL SKILLS

Programming Languages: Java, Python, C, C#, JavaScript, SQL, HTML/CSS, Bash, PowerShell, GDScript
Frameworks & Tools: Node.js, Selenium, PySide6, Flask, MySQL, Jinja2, Bootstrap, Excel, Git, Godot, Unity, VMware

RELEVANT EXPERIENCE

Acushnet Company | Fairhaven, MA **May 2026 – August 2026**

Product Customization Coordinator

- Developed a Python automation tool with a PySide6 GUI to streamline product customization joint-mapping for over 2,000 items, integrating Excel lists with automated browser interactions.
- Reverse-engineered the existing website's API and used Selenium to automate mapping workflows, adding macros and shortcuts while allowing human validation through the live website.
- Increased mapping throughput by approximately 167% by turning a manual workflow into a human-in-the-loop automation process.

Vans | Boston, MA **September 2025 – April 2026**

Sales Associate

- Processed customer transactions and answered questions about products in a fast-paced retail environment.

YMCA Southcoast | Fall River, MA **July 2025 – August 2025**

Lifeguard

- Monitored pool activities and enforced safety policies to maintain a safe environment for patrons.
- Maintained emergency readiness and aquatic facility equipment to support safe daily operations.

Acushnet Company | Fairhaven, MA **July 2023 – August 2023**

QA Assistant

- Developed Python tools to validate and populate Excel spreadsheets containing seasonal product catalog data and embroidery machine operator entries.
- Automated data validation and generated error summaries to help quality assurance identify and correct data-entry errors.

PROJECTS

Mock Full-Stack Apparel Store | *Academic Project* **April 2026**

- Developed a Flask-based apparel storefront with MySQL-backend product browsing, search, filtering, shopping cart, and administrative inventory management.
- Designed an eight-table relational database with foreign-key relationships and a junction table. Implemented SQL views, functions, triggers, and stored procedures for order processing and reporting.

State-Driven 2D Combat Prototype | *Independent Project* **November 2026**

- Designed and implemented a reusable hierarchical state machine in GDScript, using inheritance and signal-driven transitions to organize player behavior and state-specific logic.
- Developed a modular boss AI architecture using composable behaviors and sequenced actions, separating high-level behavior selection from individual attack execution.
